EDUCATION

B.TECH Computer Engineering
AISSMS IOIT, PUNE

August, 2023 - June, 2027
GPA: 9.3/10.0

PROFESSIONAL EXPERIENCE

Research Intern

AISSMS IOIT 🔗

- Published an IEEE research paper titled “AI-Driven Data Intrusion Detection and Prevention” focusing on intelligent cybersecurity threat detection and prevention systems.
- Published a review on sensor technologies improving quality, safety, and efficiency in the food industry.

Vice President

Catalyst AISSMS IOIT 🔗

- Leading and planning the execution of real-world, impact-driven projects and hackathons.
- Skill-first culture** by connecting students with industry-relevant challenges, mentorships, learning experiences.

TECHNICAL SKILLS

- Programming Languages : C, C++, Python, Java.
- Libraries/Frameworks : HTML, CSS, Node.js, YOLOv8, scikit-learn, OpenCV, TensorFlow, PyTorch.
- Tools / Platforms : GitHub, Windows, Linux (Ubuntu), RoboFlow, Kaggle.
- Relevant Coursework : Data Structures and Algorithms, OOPS, OS, Machine learning, Artificial Intelligence, Data Science.
- Databases : MySQL, MongoDB, SQLite.
- AI / ML : Machine Learning, Deep Learning, Computer Vision, Natural Language Processing (NLP), Explainable AI (XAI), Neural Networks, Model Training & Optimization, Data Analysis, Predictive Modeling, YOLOv8, TensorFlow, PyTorch, OpenCV, Scikit-learn.

PROJECTS

BugChan - LLM-based Debugging Assistant 🔗

- Developed the AI layer for BugChan, an intelligent debugging assistant using LLMs and contextual code analysis for automated bug resolution support.
- Built conversational AI workflows to analyze repositories, detect issues, and generate optimized debugging suggestions.

Pragyantra – AI Financial Decision Simulator - Hackathon Winner | AI/ML + Monte Carlo Simulation 🔗

- Built an AI-powered financial simulator integrating Monte Carlo simulations and LLM-based reasoning for investment risk analysis and decision support.
- Designed the end-to-end AI pipeline for predictive insights and personalized financial recommendations.

AI Assistive Tool for Blind People - AI + IoT Accessibility System

- Developed an AI-powered assistive system using computer vision, object detection, and audio navigation to help visually impaired users navigate surroundings in real time.
- Integrated IoT and voice-based interaction for hands-free accessibility and intelligent environmental awareness.

Reduce Emergency Response Time Traffic System - Hackathon Winner | AI + Embedded Systems

- Developed an AI-driven emergency traffic system capable of detecting ambulance sirens, accidents, and SOS signals to create automated green corridors.
- Built the AI detection pipeline and hardware integration to reduce emergency response time through smart traffic automation.

ACHIEVEMENT

- Winner 🔗 – BlackScout Category at ETHOnline International Hackathon, awarded 1000 USDC.
- Winner 🔗 – Best Solution for Problem Statement at National Level Techathon 3.0, awarded ₹10,000.
- First Prize 🔗 – FinTech Category at National Level Pragyantra Hackathon, awarded ₹20,000.
- Published IEEE Research Paper 🔗 on “AI-Driven Data Intrusion Detection and Prevention”.
- Organized TENET HACK 🔗 – a National Level 12-Hour Hackathon with participation from 150+ teams across India.
